

## Post-Harvest and Agro-Processing Technologies Division

Our research activities at the Post-Harvest and Agro-Processing Technologies (PHATs) division, ARC Infruitec-Nietvoorbij in Stellenbosch convert fundamental research into practical solutions or outcomes and innovations within the South African Agri-Food value chain. We annually contribute to formal training of the Nation's agricultural and food science and technology graduates, as well as to small and medium enterprise (SME) development programs within the agricultural sector. Our involvement in SME development is primarily focused on the previously disadvantaged demography.
